

READ THIS FIRST

Kantronics' modems ship with Pacterm 2.0, a DOS-based starter communications program for PCs. The program is contained on the INFO diskette, along with other useful information. To install and run Pacterm 2.0, to set up your modem, insert the INFO diskette in the A: drive and type PACTERM and enter. Follow the instructions on the screen and/or consult the "Pacterm" chapter within the modem manual.

At present, Kantronics does not support a Windows 3.1 program, but many third party suppliers offer them. Browse the INTERNET WEB for sources or ask your dealer.

Kantronics is now shipping, as an option, PACTERM'98, a full featured Windows'95 terminal program, written to match Microsoft's Windows'95 guidelines. Pacterm'98 supports the KPC-3, KPC-3 Plus, KPC-9612, KPC-9612 Plus; KAM with enhancement board, and the KAM Plus. All modes of the KAM Plus are supported in multiple windows, including the recently added Globe Wireless and WLO "free signal" detection for INTERNET service at firmware version 8.2. For details on HF ship-to-shore INTERNET e-mail, see the articles on our web site.

You may download a demo copy of Pacterm'98 from our website - www.kantronics.com - at this time. The download consists of four files, one for each of four HD diskettes, and takes about one-half hour. Once the files are downloaded to your desktop, use WINZIP (or PKZIP) to generate backup copies via your A: drive. TO install the program via the A: drive, start by inserting diskette # 1, clicking on RUN and typing setup; then follow the on-line instructions.

When installing Pacterm'98 DO NOT refer to the Pacterm instructions contained within the modem's manual. Those instructions are for Pacterm 2.0, contained on the single INFO diskette.

To operation the HF modes with Pacterm'98, you'll have to register the program and pay \$ 69.95. Until you register, the HF modes, such as Pactor, are dimmed out. To register and obtain a password and serial number, tied to your call sign, call, e-mail, or fax Kantronics with your VISA/MC card and your call sign(s). We will return the password and serial number to you by e-mail (preferred), fax, or mail. Since the password is case sensitive with numbers and letters, we deliver it to you only in printed form, not over the phone.

You may order the diskettes with serial number from the factory or an authorized dealer for \$ 69.95. If you order from a dealer, the package will contain a serial number but you must still call Kantronics with that serial number and supply us with your call sign to obtain a password for your program. If you order the diskettes directly from us, still supply your call sign(s) so that we may include the password with the shipment

The manual for Pacterm'98 is on diskette # 4 in the form of HELP files. If you prefer, we sell a printed copy of this help file for \$ 19.95 plus \$ 7.50 shipping/handling per factory order. The printout is about 100 pages.
